

Find out more at OpexToken.com

# INTRODUCTION

OPEX (\$OPEX) is an automated liquidity pool growth and incentive holder token introduced on the Binance Smart Chain through taxation of transactions. This brings together a community on the Metavars expedition \$Opex is a DeFi coin based on experimental liquidity, which works as a decentralised token generated by individuals. Our Platform is designed to make conventional financial principles more untrusted, decentralised and automated, while at the same time keeping user information and data privately and confidentially accessible to Matevars. It serves as evidence of liquidity Token, which does not allow for unforeseen surges and keeps the high stability

#### **OURSTANDARDS:**

#### **DECENTRALIZED DEFLATIONARY TOKEN**

Tokens or coins are deflated and the value of them in contrast with national currency is essentially higher. Decentralized exchanges are a reliable option for bitcoin purchases and sales without trusting a third party to finance their business. A decentralized application is the core purpose of a smart contract, so that business logic may be programmed that allows various activities, procedures, or transactions. LOCKED LIQUIDITY Liquidity pools are pools of tokens kept in smart agreements that provide liquidity for decentralized trading to mitigate the uncertainty that such systems produce. The larger the ratio, the more the security margin the Company will cover the current liabilities. More than one is a good liquidity ratio. None of us have to worry about our platform Liquidity pool being closed and filled in automatically

BSC(BINANCE SMART CHAIN):

Binance Smart Chain (BSC) is a network blockchain designed for the operation of intelligent contract-based apps. "The platform's objective is to enable developers to construct decentralized apps and empower consumers to manage their digital assets across a low latency and high capacity chain. A key platform in the front of the DeFi movement is

Binance

Smart Chain. Users may utilize Decentralized Apps to lend, borrow, stock, or even earn their funds in liquidity

pools by securing tokens There.

# MONETARY POLICY SMART CONTRACT

When reserve demand diminishes, the digital currency of an interest-bearing central bank would contribute to transferring political interest rates to the rest of the economy. They offer a lot of monetary anonymity while also permitting intermediate transactions. \$Opex is one of the most active and forward-looking money-policy contracts in the field of cryptography.

### ANTI-WHALE SYSTEM

Liquids are pools of tokens maintained under intelligent agreements that offer the liquidity for decentralized trade to alleviate the insecurity generated by these systems. The greater the ratio, the more the Company's current liabilities are covered by its security margin. There is more than one good cash ratio. Nobody needs to fear that our Liquidity Pool platform is automatically closed and filled.

ANTI-DUMPING SYSTEM

A dump is a manipulation method that people or an entity can collect and artificially raise the price of a crypto asset by the dissemination of disinformation. We provide an anti-dumping system, a tax structure for sales and purchases that are less than the average, to prevent volatility and dumping.

## **HOW TO BUY**

You only need a smartphone, an internet connection, and a trusted bep-20 wallet to purchase \$Opex . BEP20 tonnes are supported by trust wallets. You can easily buy on pancakeswap as well as on

Metamask.
